SignGuard forensic triage report

Verdict: review_required
Classification: cryptographic
SHA-256: 273d38921f72b1cfdcae009ac83bbd8d9246c589fe6e0f8593e22a7d01ab8daa

Identity and authorization are not established.
Audit receipt is supplied separately in JSON.

Visible or extracted text content changed from a signed revision or supplied baseline
Signed bytes remain valid while current appearance or text differs; consistent with a shadow attack or a legitimate later modification
pyHanko could not justify subsequent changes under its modification policy
Signer identity is not established by configured offline trust roots
Objects changed without a visible difference; this does not establish benign intent
Content changed after signing, including any intermediate changes later restored
